But the word occurs nowhere else as Arabic, has no etymon in the language, and its origin is uncertain. See note at end of this article.]

An annual table, or (more usually) a book of tables, containing a calendar of months and days, with astronomical data and calculations, ecclesiastical and other anniversaries, besides other useful information, and, in former days, astrological and astrometeorological forecasts.

(The 'almanacs' known to Roger Bacon and Chaucer were permanent tables of the apparent motions and positions of sun, moon, and (?) planets, whence the astronomical data for any year could be calculated. 'The calculations [of Regiomontanus, 1475] of the places of the sun and moon were the best that had been made in Europe..He speaks of them himself as "quas vulgo vocant *almanach*"' (Hallam *Lit. Eur.* 1855 I. 190). In 15th c. almanacs or *ephemerides* began to be prepared for definite periods, as 30 or 10 years, and in 16th c. for the year, with which was combined the ecclesiastical *calendar*; astrological and weather predictions appear in 16–17th c.; the 'useful statistics' are a modern feature.)

[*Note.* As to the origin and history of the word *almanac*:—

1. The earliest notices are: **1267** Roger Bacon *Op. maj.* xv. (1733) 120 Antiqui astronomi ponunt principium anni circiter principium Octobris, sicut patet in expositione tabularum, quae Almanac vocantur; *Op. Tert.* xi. (1859) 36 'Hæ tabulæ vocantur *Almanach* vel Tallignum, in quibus.. homo posset inspicere omnia ea quæ in cælo sunt omni die, sicut nos in calendario inspicimus omnia festa sanctorum; *c* **1345** Giovanni Villani *Cronica* XI. xli, 'Secondo l'almanacco di Profazio Giudeo, e delle tavole Toletane dovea essere la detta congiunzione di Saturno e di Giove a di 20 del detto mese di Marzo' [where the 'Tables of Toledo' (constructed *c* 1080 by Arzachel) again point to the Arabs in Spain]. Explanations have been offered of *manākh* from Semitic sources, as Arab. *manay* to define, determine, *manā* measure, time, fate; Heb. *manāh* to allot, assign, count; Arab. *manaḥa* to present, *minḥat* a gift, all of which fail in form or sense or both.

2. Eusebius, *De Præp. Evangel.* iii. 4, quotes Porphyrius as to the Egyptian belief in astrology, in horoscopes, and so-called lords of the ascendant, 'whose names are given in the *almenichiaká* (ἐν τοῖς ἀλμενιχιακοῖς), with their various powers to cure diseases, their risings and settings, and their presages of things future.' Notwithstanding the suggestive sound and use of this word (of which however the real form is very uncertain), the difficulties of connecting it historically either with the Spanish Arabic *manākh*, or with med.L. *almanach* without Arabic intermediation, seem insurmountable. Nor does the sense really point to such tables as those described by Roger Bacon, Chaucer, and Regiomontanus.

3. *Manākh* has been identified with a L. *manacus* or *manachus*, applied in Vitruv. ix. 8 (Dialling) to a circle in a sun-dial showing the months or signs of the zodiac, an origin which would well explain Pedro's word in both senses; but the true reading of Vitruvius's word is now generally agreed to be *mēnæus* (Gr. μηναῖος monthly); and it has not yet been shown that the reading *manacus* was ever so generally known or accepted, as to make its adoption probable at the hands of any Arab astronomer in Spain. Nor has it been shown to be impossible. Of many other conjectures none are worthy of notice.]

[a. OFr. *aumoner*, *aumonier* (12th c. *almosnier*, 13th *aumosnier*, 15th *aulmosnier*, mod. *aumônier*):—late L. **almosinārius* for *eleēmosynārius*, prop. adj. 'connected with alms,' sc. *homo*, f. *eleēmosyna* ALMS. But perh. partly due, esp. in sense 3, to OFr. *almosnère*, *-eor*, later *-eur*:—L. *eleēmosynātor -ātorem* an alms-giver.

The native development was *aumoner*, *aumener*, *aumner*, *amner* (ā) the regular form in 16th c. But the Renascence brought up a number of artificial spellings, after later Fr. *aulmosnier*, *ausmonier*, AFr. *almoignier*, and their med.L. adaptations, under the influence of which and the native *alms*, *amner* has been artificially refashioned as *almner*, *almener*, *almoner*, and the pronunciation has followed the spelling. The 15th c. *aumere*, *almer*, and Sc. *almowr*, are direct formations on *aumes*, *almes*; *aumer-er*, *amoner-er* seem to be f. *awmere*, *awmener*, a purse; see ALMONER[2].]

d. *Metallurgy.* (*a*) Applied to the first of a series of allotropic forms of a metal, as ***alpha iron***. (*b*) Applied to a solid solution in a range of alloys, as ***alpha brass***, the first of a series of alloys of copper and brass: that in which there is the highest proportion of copper.

1885 *Jrnl. Iron & Steel Inst.* II. 618 The author [Osmond] believes .. that there are two .. varieties of iron, *α* and *β*. The crystalline iron *α* is obtained by tempering at a red heat, followed by a slow cooling. This is transformed into the *β* variety (which the structure of tempered steel shows to be amorphous) either by a permanent alteration at a low temperature, or by rapid cooling from a red heat .. in the presence of carbon, or some other body (manganese, tungsten) exercising the same influence on the .. steel. **1902** *Encycl. Brit.* XXIX. 572/2 We must recognize the further complication in the constitution of iron, due to its having at least three distinct allotropic modifications, *α*, *β*, and *γ*, each corresponding to a distinct range of temperature. *α* iron is the weak, ductile, magnetic variety .., *β* iron is the non-magnetic variety, [etc.]. **1914** W. ROSENHAIN *Physical Metallurgy* viii. 167 Iron is capable of existing in at least three diverse or 'allotropic' conditions. These are generally known as the *γ*, *β* and *α* forms of iron. **1957** *Encycl. Brit.* XII. 669/2 Pure iron or ferrite at room temperature consists of tiny crystals of so-called alpha iron, crystallized in body centred arrangement.

1904 HEYCOCK & NEVILLE in *Phil. Trans. R. Soc.* A. CCII. 9 Crystals of five different types, which we designate *α*, *β*, *γ*, *δ*, *η*... The *α* crystals are solid solutions, apparently isomorphous with pure copper. They may contain any percentage of tin not greater than 9 per cent. The *β* crystals are also solid solutions, perhaps isomorphous with the *α*. **1919** *Jrnl. Inst. e. *Physics.* ***alpha radiation***, the first of three types of radiation emitted by radio-active substances, and consisting of positively charged particles. So ***alpha particle*** (identified with the helium nucleus: see quot. 1908), ***ray***.

1899, 1902 [see BETA 2 f]. **1903** RUTHERFORD in *Phil. Mag.* V. 184 The *α* rays are complex, and probably consist of particles projected with velocities lying between certain limits. **1903** —— in *Nature* 20 Aug. 366/2 The determination of the mass of the *α* body .. supports the view that the *α* particle is in reality helium. **1908** —— & GEIGER in *Proc. R. Soc.* A. LXXXI. 172 We may conclude that an *α*-particle is a helium atom, or, to be more precise, the *α*-particle, after it has lost its positive charge, is a helium atom. **1925** F. b. As applied to the 'holy table' of the English Prayer-book, which occupies the place of the altars removed after the Reformation.

The word was the subject of much controversy in 17th c. In common parlance it is now used to a great extent indifferently with 'Communion-table' (Lord's table, Holy table) sometimes literally, sometimes figuratively; but controversially, one or the other is used according to the doctrine of the Eucharist held or sought to be emphasized.]

Usually taken as a perversion of L. *malagma* (in Pliny and the physicians) a mollifying poultice or plaster, a. Gr. *μάλαγμα* an emollient, f. *μαλάσσ-ειν* (stem *μαλακ-*) to soften; or of an Arabic adaptation of *μάλαγμα* with prefixed *al-* (as in *al-chemy*, *al-embic*, etc.): see the form (of the vb.) *almalgamynge* in one MS. of Chaucer, and *algamala* in Du Cange. †ambassade, embassade ('æm-, 'ɛmbəseɪd). *Obs.* or *arch.* Forms: 5 ambaxade, 5-9 ambassade; also 5 am'bassiad(e, 5-6 -'bassad, 6 -'bassed, -'basset; and with *e-* as embassade, enbassade, etc. [a. Fr. *ambassade*, 15th c. *ambaxade*, ad. OSp. *ambaxada* (mod. *em-*), cogn. w. Pr. *ambaissada*, It. *ambasciata*, OFr. *ambassée*, (superseded by this form in -ADE: see AMBASSY):—L. **ambactiāta* (found in med.L. as *ambaxiāta, -asciāta, -assiāta, -asiāta*), ppl. derivative of **ambactiāre* to go on a mission, f. *ambactia, ambaxia* (in Salic and Burgundian Laws) 'charge, office, employment,' n. of office f. *ambactus* a servant (? vassal, retainer). The OFr. form *ambassée* was also adopted in Eng. as AMBASSY, EMBASSY; as was also the med.L. as AMBASSIATE, etc., the forms of which appear to have been quite mixed up with those of the present word, leading to the pronunciation in 5-6 *am'bassiade, am'bassade*, and the spellings in *-ad, -ed, -et*. But Shakspere and subseq. writers have *amba'ssade* or *'ambassade*.

The origin and meaning of *ambactus* have given rise to much discussion. According to Festus '*Ambactus* apud Ennium lingua Gallica *servus* appellatur'; and Caesar (*B.G.* VI. 15) applies it to the vassals or retainers of a Gallic chief. Hence Zeuss and Glück identify it with Welsh *amaeth, ammaeth*, (for **ambaeth*) 'husbandman, tiller of the ground,' perh. orig. 'tenant, retainer,' or even 'goer about, footman.' Grimm finds the origin in OHG. *ambaht*, Goth. *andbahts* servant, retainer, OE. *ambeht*, ON. *ambótt* (cf. AMBOHT), variously explained as f. *and* against, towards + *bak* BACK, or **bah* to do, or **baht* = Skr. *bhakta* devoted, and assumed to have been adopted in Gallic, or erroneously taken as Gallic by Festus. But the majority of etymologists consider the Teut. word to be an adaptation or refashioning of the Lat. or original Celtic. For the latter, Mahn (*Etym. Unt.* 145) has also proposed *ambi(amb-, amm-, am-)* about + Breton *aketuz, akeduz* 'busy,' hence 'one employed about (his lord).']

The innumerable early variants are chiefly adoptions or adaptations of the med.L. prop. **ambactiātor* (agent-noun f. **ambactiāre*; see AMBASSADE), but found as *ambaxi-, ambasci-, ambassi-, ambasi-ator, -itor*; also with initial *e* and *i, embassiator, imbassiator*, etc.; varied with crosses between these and the Fr., and phonetic forms like *embassader*. Of these variants *embassador*, supported by *embassy*, was much more common than *ambassador* in 17-18th c., and was still the common spelling in United States in 19th c.

1973 P. FELGETT in *Hi-Fi News* July 1311/1 There is still a need for a general term referring to either circular or spherical information, and for this purpose we can translate into Latin and say 'ambisonic'. **1973** *New Scientist* 20 Dec. 843/1 The CD4 system..is a method of frequency modulating the two channels of a conventional stereophonic LP record so as to provide four separate channels. This leaves open the way in which the channels are to be employed, and the 'ambisonic' system can use them

optimally. **1976** *Gramophone* Sept. 501/2 The 'ambisonic' microphone system used imparts something of a bathroom quality in stereo. **1980** *New Scientist* 20 Mar. 929 Ambisonic master recordings are made in the full four-channel format. But the few which have so far been made available as discs or broadcasts have used three channels or less. **1983** *Radio Times* 19 Mar. 12/1 As yet..there are no ambisonic radio receivers.

Hence **ambi'sonically** *adv.*

1976 *Gramophone* Feb. 1398/2 QS must be compatible with ambisonic reproduction, since RM is itself ambisonically compatible. **1983** *Radio Times* 19 Mar. 12/4 No one can hear *Gilgamesh* ambisonically.

AFr. *amerci-er* (not in continental Fr.), f. *à* to, at + *merci*:—L. *mercēdem*, which passed through the senses of 'wages, remuneration, a gift in recompense, a gift generally, a gift offered gratuitously (already in Gregory the Great), a present, a favour, grace, MERCY.' From the phr. *estre à merci* to be at the mercy of any one, was

formed *estre amercié*, at first always passive (as in Magna Carta), and then the active *amercier* (in Britton *c* 1292). Britton has *estre en nostre merci* synonymous with *estre amercié*. 'To be amerced' was thus orig. to be at the mercy of any one as to amount of fine, to 'come in his will,' be fined at his pleasure; hence the active 'to amerce,' to fine arbitrarily or according to one's own estimate. The *-y* was lost through being viewed as inflexional, or through phonetic identity of *amercied*, *-id*, *-ed*.

amide ('æmaɪd, ə'maɪd; the latter always in comb.). *Chem.* [f. AM(MONIA) + -IDE.]

†**1.** *orig.* A name given to the first-discovered derivatives of ammonia (NH_3), in which one atom of H was exchanged for a metal or organic radical, acid or basic; these being viewed as compounds of the *metal*, etc. with a hypothetical radical *amidogen*, NH_2. (Since the discovery of the actual relations of these 'amides' to the 'imides' and 'nitriles,' the compound ammonias have been rearranged according to the nature of the replacing radical, as *amides*, *amines*, and *alkalamides*. The present sense of 'amide' is therefore at once wider and more restricted than the original. See next.)

1850 DAUBENY *Atom. The.* viii. (ed. 2) 237 Compounds of NH_2 have been hitherto called amides..but this name will probably be now discarded. **1854** SCOFFERN in Orr *Circ. Sc., Chem.* 503 Others believe it to be an amide of metallic silver. **1863** WATTS *Dict. Chem.* (1872) I. 169 [Potassamine] was regarded as a compound of NH_2 (*amidogen*) with potassium, NH_2K, and called *amide* of potassium, analogous to the cyanide CNK. In process of time, compounds came to be discovered..in which 2 or 3 atoms of hydrogen were replaced by metals or compound radicles, to which the name amide in its original sense of a compound containing amidogen, NH_2, was plainly inapplicable; accordingly these compounds were designated by other names *imides*, *nitriles*, &c.

2. *Mod. Chem.* Generic name of the compound ammonias derived from one or more molecules of common ammonia (NH_3), by exchanging 1, 2, or all 3 hydrogen atoms for acid radicals of equivalent acidity.

According to the number of ammonia molecules represented, they are denominated *Monamides*, *Diamides*, *Triamides*, &c., all of which may be *primary*, *secondary*, or *tertiary*, according as $\frac{1}{3}$, $\frac{2}{3}$, or the whole of the hydrogen is replaced. The nature of the replacing radicals (or related acids) is shown by prefixing their names (contracted), as *Acet-amide*, *Tri-acet-amide*, *Ox-amide*, *Succin-amide*, *Cyan-amide*, *Phosph-amide*, *Phenyl-di-benz-amide*. *Primary* amides may be viewed as formed from organic acids by substituting one atom of amidogen (NH_2) for one of hydroxyl (HO); they form one half of the earlier 'amides' in sense 1, the other half being now AMINES. The *secondary* and *tertiary* amides are the acid members of the former 'imides' and 'nitriles.'

1863 WATTS *Dict. Chem.* (1872) I. 169 Ammonias in which 1 or more atoms of hydrogen are replaced by an *acid*-radicle: to this division we propose to confine the name of 'amides.' *Ibid.* 170 Primary amides are mostly solid and crystalline, easily fusible, neutral to test paper, volatile without decomposition. **1879** *Syd. Soc. Lex.* s.v., Most of the nitrogenous animal bases are amides.

3. Extended to compounds intermediate between amides proper and AMINES: see ALKALAMIDES.

amine ('æmaɪn, ə'maɪn; the latter always in comb). *Chem.* [f. AM(MONIA) + -INE.]

Generic name of the *compound ammonias*, in which one or more of the three hydrogen atoms in ammonia, NH_3, are exchanged for alcohol or other positive radicals, as methyl, ethyl, phenyl, or for a metal, as potassium, platinum, zinc.

They are distinguished as *Monamines*, *Diamines*, *Triamines*, according to the number of ammonia molecules represented in the molecule of the compound; each of which may be *primary*, *secondary*, or *tertiary*, according as $\frac{1}{3}$, $\frac{2}{3}$, or the whole of the hydrogen is replaced. The nature of the replacing radical or element is shown by prefixing its name, as in primary amines, *Methylamine*, *Ethylamine*, *Phenylamine*, *Platinamine*, *Potassamine*, *Zincamine*; or, in secondary and tertiary amines, in the case of two or three replacements by the *same* radical, *Di-ethylamine*, *Tri-potassamine*, or by *different* radicals as *Methyl-ethylamine*, *Di-methyl-ethylamine* (NH_3, in which 2 atoms of H are replaced by methyl, and 1 by ethyl), *Methyl-ethyl-amylamine* (containing one atom each of methyl, ethyl, and amyl, in union with the nitrogen of the original ammonia). *Primary* amines were originally included under AMIDES in the earlier sense; they may be represented as derived from the paraffins by substitution of amidogen, NH_2, for hydrogen, or from the alcohols by substitution of amidogen for hydroxyl.

1863 WATTS *Dict. Chem.* (1872) I. 169 Ammonias in which 1 or more atoms of hydrogen are replaced by base-radicles. This division we call 'amines.' **1869** ROSCOE *Elem. For high quality transmission AM has largely given way to FM (frequency modulation).

†**an,** *a.*[1] Earlier form of the numeral ONE; retained in the north. The OE. *án* began *c* 1150, to be reduced bef. a cons. to *a*; in the south, *ān, ā* were, bef. 1300, regularly rounded to *ōn* (*oon, one*), *ō* (*oo*) in the full original sense of the numeral; but when the sense was weakened to that of the 'indef. article' (see next) they continued to be written *an, a* (*ăn, ă*). In the north, the spelling *an, a*, was retained in both senses, the stress alone (as in Ger. *ein*, Fr. *un*) distinguishing the numeral from the article; and *an* was at length commonly written *ane*, which spelling, though proper to the numeral (*ane* = *ān*, with *e* mute indicating long vowel), was, especially by Sc. writers, used for the article also. See ANE, a *adj.*[2], and, for the senses, ONE; the following instances illustrate the form only.

an (toneless ən; emph. æn), *a.*[2], '*indef. article.*' The older and fuller form of *a*, now retained only before a vowel sound, as *an* orator, *an* honour, *an x*, *an* 'M.P.'; also by most writers before *h*, and by some even before *eu*, *ū* (= *yū*), in unaccented syllables, as *an hyæna*, *an euphonic change*, though many writers, and most speakers, now use *a* in such positions. *An* originated as a lighter or stressless pronunciation of the numeral *án* 'one'; see above: already by 1150, in midl. dial. it was reduced before a cons. to *a*; but in the south, the fuller *an*, even retaining part of its earlier inflected cases, is found as late as 1340. *An* was often retained before *w* and *y* in 15th c., as *an wood*, *an woman*, *an yere*, *such an one*, and was regular before *h* down to 17th c., as *an house*, *an happy*, *an hundred*, *an head* (1665). Its history thus shows a gradual suppression of the *n* before consonants of all kinds, and in all positions. For illustrations, and signification, see A *adj.*[2]

an, an' (ən, (ə)n), *conj.* [weakened from AND.]
1. = AND B. (L. *et.*)
In this sense the weak form *an* appears soon after 1100, and is not uncommon in ME., esp. northern, but very rare after 1500, till it reappears in modern times in the representation of dialect speech, in which it is printed *an'* with the apostrophe, recognizing the dropped letter. But *and* is almost always so pronounced in conversation, and even in reading, though this is conventionally considered a fault.

2. = AND, C. = *if.* (L. *si.*) *arch.* and *dial.*
In this sense *an, an'*, is rare bef. 1600, when it appears occasionally in the dramatists, esp. before *it*, as *an' 't please you, an' 't were*, etc. As the prec. sense was not at this time written *an*, modern writers have made a conventional distinction between the two forms, *an'* for 'and,' L. *et*, being dialectal or illiterate, but *an'* or *an* for 'and,' L. *si*, archaic, or even literary. Except in *an' 't*, *an* is found only once in the 1st Folio of Shakspere (see below); but modern editors substitute it for the full *and* usual in Shakspere and his contemporaries. Dialectally the two senses are alike *an'*; the intensified *and if, an if*, common in 17th c., remains in the s.w. dial. as *nif.*

†**an,** *prep. Obs.* [cogn. w. Goth. and OHG. *ana* (MHG. *ane*, mod.G. *an*), OS., OFris. *an*, ON. *á*; Gr. *ἀνά*.] The orig. form of the prep. which, in prehistoric Eng., in accordance with the regular phonetic history of short *a* before nasals, was rounded to ON, a form, unlike the parallel *ond, hond, lomb, monn*, ever after retained. In Anglo-Saxon, but not in Anglian, *on* also absorbed the prep. *in*. As to its history in combination, see AN- *pref.* 1 below. After 11th c. when *on-* in comb. was generally reduced to *ă-* bef. cons., *ăn-* bef. vowel, the same befell *on* prep. to some extent, esp. in familiar phrases, as *an edge*, *an end*, *an erthe*, *an even* (at eve), *an high*, *an hand*, *an horseback*: see A *prep.*[1] But in course of time all these were altered back to *on*, or changed to *in*; *an* being retained only in those in which its prepositional character was no longer apparent, as to go *an* (now *a*) hawking, twice *an* hour. The following quotations illustrate the forms; for the various uses, see A *prep.*[1] See also AN-AUNTER, AN-END, AN-ERTH.

an-, *prefix*, from various sources.
1. OE. and ME. **an-**, = AN *prep.* (see prec.) In OE. the orig. *an-* remained only under the stress, i.e. in sbs.; otherwise, it was, like the separate preposition, rounded to *on-*; thus '*angin* beginning, *on'ginnan* to begin, *on'bútan* about. An example of the former remains in ANVIL. In ME. *on-* was regularly levelled to *ă-* (A- *pref.* 2); before a vowel (rarely bef. cons.) *ăn-*, as in *anelen, aninne, anoven, anunder, anuppe, anhigh, anblow, anlike*. Most of these are now obs.; a few remain with *an-* conformed to the prep. *on*, as *on high*; levelled to *a-* as *alike*; or assimilated to Fr. *en-*, as (?) *enamel*. Only where the individuality of the prefix has been lost, does *an-* remain, in *anon, anent, an(n)eal* (OE. *on-ǽlan*, ME. *an-ele(n)*.
2. ME. **an-**, reduced f. OE. *and-* 'against, towards, in return for': see AND-.
3. ME. **an-**:—OE. *án* one, retained in early ME., and subseq. in north. dial., in words now written with *on-*, *one-*, or obs.; as *ankenned, anfald, anhad, anlepy, anly* (= ONLY), *anmod, anred, anwill*.
4. ME. **an-**, = Anglo-Norm. *an-*, OFr. *en-*:—L. *in-*, = 'in, into,' as ANOINT (L. *inunctum*), AN(N)OY; *anhaunse, anjoin, anvenime*, where subsequently spelt *en-*; *andetted*, subseq. *entdetted, indebted*; *anpayre*, subseq. *apayre*, also *enpayre, empayre, impair*.
5. ME. **an-**, for earlier *a-* = OE. *a-* (A- *pref.* 1), or OFr. *a-*:—L. *ab-, ad-, ex-, ob-*, which, being phonetically identified with No. 1 above, was like it expanded to *an-* bef. vowels, and occas. bef. consonants: as in *a(n)chesoun* = oc-casion, *a(n)ferm* af-firm, *a(n)ired, a(n)oure* ad-ore, *a(n)orn* ad-orn, *a(n)tempered* at-tempered; *a(n)s-aumple* ex-ample. Such of these as survived were either refashioned after L., as *adorn*, or changed *an-* to *en-, in-*, as *inorn*; *example, ensample*, shows both processes.
6. ME. **an-**, a later spelling of earlier *a-*, = OFr. *a-*:—L. *an-* assimilated form of *ad-* 'to,' when followed by *n-*, after L. forms or supposed analogies, as in *a(n)nounce*. This doubling of the *n* began in 14th c. Fr. and extended to Eng. in 15th c. In 16th c. it was ignorantly extended even to words containing *an-* from other sources, from which it has generally been again ejected exc. in ANNEAL, ANNOY, See AD-.
7. **an-**, repr. L. *an-* = *ad-* before *n-*, in words derived from L. directly, or indirectly through later Fr., and in words formed on the analogy of them, as *an-nex, an-nul, an-nunciation*.
8. **an-**, repr. L. *an-* before certain consonants, for *am-, amb-, ambi-*, 'on both sides, about.' Through OFr. in *an-(h)ele*; directly from L. in *an-cipitous, an-fractuous*.
9. **an-**, repr. Gr. *ἀν-* for *ἀνά* 'up, upwards, back, etc.' (see ANA-) bef. vowel, as in ANAGOGE, Gr. *ἀναγωγή*; also in ANCHOR *sb.*[2], ANCHORET.
10. **an-**, repr. Gr. *ἀν-* privative, 'not, without, wanting' (reduced before consonants to *ἀ-*: see A- *pref.* 14), cognate w. Skr. *an-*, L. *in-*, Eng. *un-*, 'not, non-.' In words already formed in Greek as *an-archy, an-arthrous*; whence common in modern scientific words as *an-allagmatic, an-alphabetic, an-antherous, an-isomerous*.

-an, *suffix.* **I.** Derivative. **1.** repr. L. *-ānus, -āna, -ānum* 'of, or belonging to'; as *castellān-us, oppidān-us, pāgān-us, urbān-us, silvān-us, Africān-us, Rōmān-us, Sullān-us, Justiniān-us*. In OFr. this became *-ain*, or (after *i*) *-en*, as *chastelain, Romain, payen, Italien*; and so originally adopted in ME., but subseq. refashioned after L. as *-an*, and so in all words formed in Eng. direct, or adopted from the mod. langs. (It. Sp. Pg. *-ano*, Fr. *-ain, -en.*). Esp. added to proper names; 'belonging to a place' as *American, Chilian, Russian, Oxonian*; 'following a founder,' as *Arminian, Lutheran, Muhammadan, Linnæan*, or 'a system,' as *Episcopalian, Presbyterian, Anglican, Gallican*; and, in Zoology, to names of divisions, 'belonging to a class or order,' as *mammalian, reptilian, crustacean, arachnidan, acalephan*. Primarily these are all adjs., but as in L. etc., all may be used subst., and with some this is the more frequent use. The zoological words supply singulars to the collective plurals in *-a*, as *a crustacean* = a member of the *Crustacea*. Already in L. this termination was often added to others, to *-i-us* so commonly that *-iānus*, -IAN, is in use merely a euphonic variety of *-an*; cf. *Corinth-i-an, Rom-an, Christ-i-an, Muhammad-an*.
2. in *Chem.* for *-ane*, arbitrary ending proposed by Davy for names of chlorides

containing one atom of chlorine, as in *azotan* obs. In some words *-an* is a meaningless formative as *allox-an*.

†**II.** Inflexional. **1.** In OE., ending of oblique cases, and nom. pl. of weak declension. Both became in ME. *-en*, now rarely preserved in pl., as *ox-en*:—OE. *ox-an*. Hence (dat. or loc. sing.) in advb. or prep. forms like *ut-an*, *abut-an*, *befor-an*, ME. *uten*, *abuten*, and *ute*, *abute*. Now obs.

2. In OE., ending of pres. inf. of vbs., levelled in ME. to *-en*, *-e*, and now lost, as OE. *writ-an*, *send-an*; ME. *writ-e(n*, *send-e(n*; mod. *write*, *send*.

3. Equivalency or likeness of relations; 'resemblance of things with regard to some circumstances or effects' (J.); 'resemblance of relations' (Whately); a name for the fact, that, the relation borne to any object by some attribute or circumstance, corresponds to the relation existing between another object and some attribute or circumstance pertaining to it. Const. *to*, *with*, *between*.

This is an extension of the general idea of proportion from quantity to relation generally, and is often expressed proportionally, as when we say 'Knowledge is to the mind, what light is to the eye.' The general recognition of this analogy makes *light*, or *enlightenment*, or *illumination*, an *analogical* word for *knowledge*.

7. *Logic.* a. Resemblance of relations or attributes forming a ground of reasoning. b. The process of reasoning from parallel cases; presumptive reasoning based upon the assumption that if things have some similar attributes, their other attributes will be similar.

DAVIES *Metric Syst.* III. 176 The analogy of all experience warrants the conjecture. **1875** STUBBS *Const. Hist.* I. i. 11 Analogy, however, is not proof, but illustration.

8. *Language.* Similarity of formative or constructive processes; imitation of the inflexions, derivatives, or constructions of existing words, in forming inflexions, derivatives, or constructions of other words, without the intervention of the formative steps through which these at first arose.

Thus the new inflexion *bake*, *baked*, *baked* (instead of the historical *bake*, *book*, *baken*) is due to analogy with such words as *rake*, *raked*, *raked*, etc. When the formative steps are not only absent, but could not have been present, the process is often called *False Analogy*; as when *starvation* was formed to bear the same relation to *starve*, that *vexation* does to *vex*. *Vexation* being historically due to the existence of *vexāt-* the ppl. stem of a L. vb. *vexā-re*, whence through Fr. *vexe-r* we have *vex*, there could be no such formative steps in the case of the Teut. vb. *starve*. But as all mere analogy, even that of vex-*es*, vex-*ed*, vex-*ing*, is in this sense 'false,' the term *form-association* is now commonly used of an analogical process which considers the mere *forms* of existing words, apart from their history.

Soc.* (1877–9) 391 Paul goes on to protest against the epithet 'false' analogy, remarking that it is really 'correct,' working as it does with unerring psychological instinct.

9. *Nat. Hist.* Resemblance of form or function between organs which are *essentially* different (in different species), as the analogy between the tail of a fish and that of the whale, the wing of a bat and that of a bird, the tendril of the pea and that of the vine.

1814 SIR H. DAVY *Agric. Chem.* 62 Linnæus, whose lively imagination was continually employed in endeavours to discover analogies between the animal and vegetable systems, conceived 'that the pith performed for the plant the same functions as the brain and nerves in animated beings.' **1854** WOODWARD *Man. Mollusca* 55 Resemblances of form and habits without agreement of structure .. are termed relations of .. analogy. **1857** BERKELEY *Cryptog. On Greek analogies the vb. would have been *analysize*, Fr. *analysiser*, of which *analyser* was practically a shortened form, since, though following the analogy of pairs like *annexe*, *annexe-r*, it rested chiefly on the fact that by form-assoc. it appeared already to belong to the series of factitive vbs. in *-iser*, Eng. -IZE, = L. *-īzāre*, f. Gr. *-ίζ-ειν*, to which in sense it belonged. Hence from the first it was commonly written in Eng. *analyze*, the spelling accepted by Johnson, and historically quite defensible. Kant* vii. 319 Analysis..is simply going back on the path which the mind has already travelled, proceeding from the more to the less determinate.

9. *Philos.* a. The resolution into their elements, as a philosophical procedure, of complex things, facts, propositions, and concepts. Freq. with defining word, as *logical* (cf. also sense b), *philosophical analysis*.

1828 J. S. MILL in *Westm. Rev.* IX. 144 To perform the logical analysis of an argument, in the manner pointed out by the doctrine of the syllogism, is not the best means of discovering whether it contain a flaw. *Ibid.* 171 The philosophical analysis of Predication, the explanation of what is the immediate object of belief when we assent to a proposition, is yet to be performed. **1883** F. H. BRADLEY *Logic* I. ii. 95 It is wholly unjustifiable to take up a complex, to do any work we please upon it by analysis, and then simply predicate as an adjective of the given these results of our abstraction. **1901** W. JAMES *Mem. & Stud.* (1911) vii. 169 Some psychologists are fascinated..by the dissecting out, whether by logical analysis or by brass instruments, of whatever elementary mental processes may be [in living action]. **1903** B. RUSSELL *Princ. b. (Freq. in recent Philos.) The procedure or the result of finding an expression exactly equivalent to a given word, phrase, or sentence, for the purposes of clarification.

At first an analysis was intended simply to reveal the logical structure of the analysandum, but later was often intended as leading to, or justifying, the metaphysical claim that an element eliminated by the analysis was not real, or was not fundamental: then sometimes called ***reductive analysis***, etc. (see quot. 1956).

1910 WHITEHEAD & RUSSELL *Principia Mathematica* iii. 69 In all such cases, the proposition must be capable of being so analysed that what was the grammatical subject shall have disappeared. Thus when we say 'the round square does not exist', we may, as a first attempt at such analysis, substitute 'it is false that there is an object x which is both round and square'. **1912** RUSSELL *Probl. Philos.* v. 91 The fundamental principle in the analysis of propositions containing descriptions is this: Every proposition which we can understand must be composed wholly of constituents with which we are aequainted. **1949** *Mind* LVIII. 46 A later and more radical form of reductive analysis is characterised by the complete repudiation of 'consciousness' and the replacement of mental 'acts' as the constituents of mind by events which are common to both mental and physical complexes. **1956** J. O. URMSON *Philos. Analysis* iii. 39 The elimination of logical constructions..is then another sort of analysis. It was variously called new-level (as opposed to same-level), or philosophieal (as opposed to logical), or directional, or reductive, analysis. Different names were patronized by different analysts. **1958** G. J. WARNOCK *Eng. Philos. since 1900* ii. 27 Moore involved both himself and others in difficulties resulting from the unquestioned assumption that any analysis must be of a standard pattern. It was always to consist in providing a verbal paraphrase of what was to be analysed, in the form of a longer, more explicit, but strictly synonymous phrase or sentence. **1960** [see ANALYSANDUM].

c. ***philosophical analysis***: as a branch of Philosophy, that conducted by means of, or understood as consisting in, analysis (senses a or b); philosophy concerned with the clarification of existing concepts and knowledge, by a method of reformulation, rather than with conceptual revision or addition to knowledge; *esp.* the analytic movement associated with Bertrand Russell, Moore, Wittgenstein and others.

1890 W. JAMES *Princ. Psychol.* I. xiii. 502 Our first way of looking at a reality is often to suppose it simple, but later we may learn to perceive it as compound. This new way of knowing the same reality may conveniently be called by the name of *Analysis*. It is manifestly one of the most incessantly performed of all our mental processes. **1938** R. S. WOODWORTH *Exper. Psychol.* xxv. 645 To judge the lines and angles of a figure requires analysis which is difficult because the observer is engrossed in the appearance of the figure as a whole.

-ance, *suffix*; a. Fr. *-ance*:—L. *-ānt-ia*, *-ēnt-ia*, *-ent-ia* (see -ENCE), all of which in words that survived into Fr., or were formed in Fr. as nouns of action, on the pres. pple., were levelled under *-ance*. But other L. words of this form, subseq. adopted in Fr., took *-ence* or *-ance*, according to L. spelling. Thus of popular preservation or formation, *aidance*, *assistance*, *complaisance*, *nuisance*, *parlance*, *séance*; of later learned adoption from L., *absence*, *clémence*, *différence*, *diligence*, *providence*, *prudence*, as well as *élégance*, *tempérance*. Words of both classes were adopted in Eng. in their actual Fr. forms, which they still generally retain. But, since 1500, various words orig. in *-ance* from Fr. have been altered back to *-ence*, after L.; and all words recently adopted from L., directly or through mod.Fr., or formed on L. analogies, have taken *-ence* or *-ance* according to the L. vowel. Hence, mod.E. words in *-ance* partly represent L. *-āntia*, but largely L. *-entia*, *-ēntia*, through OFr. *-ance*; partly also mod.Fr. *-ance* from vbs. of various origin. On the other hand, OFr. *-ance*:—L. *-entia*, *-ēntia*, is, in consequence of refashioning, partly represented by Eng. *-ence*. For the confusion and inconsistency which this causes in current spelling, as in *dependance*, *-dence*, *resistance*, *subsistence*, see -ENCE. As, in many cases, the OFr. vbs. themselves, as well as their derivatives in *-ance*, were adopted in Eng. (e.g. *appear -ance*, *assist -ance*, *purvey -ance*, *suffer -ance*), the suffix became to a certain extent a living formative, and was occas. used to form similar nouns of action on native vbs., as *abid-ance*, *abear-ance*, *forbear-ance*, *further-ance*, *hinder-ance*, *ridd-ance*, etc. For meaning, see -ENCE; and cf. -ANCY.

The distinction of nom. and acc. was lost before their adoption in Eng., so that they were, as in contemporary Fr., mere synonyms. In Eng., *ance'ssour* soon became obs.; *an'cestre* became phonetically *an'cetre*, *'aunceter*, of which the regular mod. form, now dialectal, is *'anceter* or *'anster*; but this was disturbed, on the one hand, by writing the termination (after late AFr.) *-our*, latinized in 16th c. to *-or*; and on the other, by spelling with *-s-*, after later Fr., *auncestre*. A combination of both gave the 16th c. spelling *auncestour*, *-or*, now *ancestor*, in which the *-s-* has come to be pronounced; *'auncitor* survived to 17th c. After *ancestre* became restricted in Fr. to the sense of 'progenitor', *ancessour*, *-eur*, was refashioned after L. as *antécesseur* in the general sense, whence also Eng. ANTECESSOR, and a mixed form ANTECESTRE.]

ancre, obs. form of ANCHOR.

ancress, earlier form of ANCHORESS.

-ancy, *suffix.* [ad. L. *-āntia*, forming abstr. sbs. on ppl. adjs. in *-ānt-em* (see -ANT).] A modern Eng. differentiated form of the earlier -ANCE, expressing more distinctly the sense of *quality, state*, or *condition*, often belonging to L. sbs. in *-ntia*, as in *ēlegāntia* 'elegant-ness,' *prūdēntia* 'prudentness,' as distinct from the sense of *action* or *process*, regularly expressed by the Fr. form *-ance*, as in *aid-ance, assist-ance, guid-ance, admitt-ance.* Partly used to form new words, partly to refashion earlier words in *-ance*, expressing quality. If the L. *diligentia, elegāntia, temperāntia, prūdēntia*, were now for the first time adopted as Eng., they would be made *diligency, elegancy, temperancy, prudency*; they owe their existing forms in *-nce*, to the fact that they were adopted from Fr., long before *-ncy* came into use. But many words, once like these, have been refashioned, and now appear with *-ncy*; e.g. *constancy, infancy, piquancy, vacancy*; the modern tendency being to confine *-nce* to action, and to express quality or state by *-ncy*; cf. *compliance, pliancy, annoyance, buoyancy.* For the formation see -ENCY, and cf. -ACY, -CY.

‖**ancyle.** *Obs.*$^{-0}$ [Gr. *ἀγκυλή* the thong of a javelin, also, a stiff joint: see ANCHYLOSIS.] (Phillips transfers the Gr. senses to Eng.)

of the shoulder-bone, also called the *coracoid*, and to the middle cornu of the lateral ventricle of the brain.

and (ænd, ənd, *famil.* ən, (ə)n), *conj.*[1] formerly *prep.* Forms: 1- and; also 1 end, ond, 2-5 ant, 3-7 an, 8-9 *dial.* an', 3-4 *occas.* a; but usually expressed by the compendium for L. *et*, in OE. 7, later &, & ('*And* per se'), so that it is impossible to tell the full form intended. [OE. shows two forms: (1) *and*, *ǫnd*(:—OTeut. **anda*) OFris. *anda*, *and*, OS. *ant*, OHG. *ant*, Goth. *anda-*, *and*, ON. *and-*, prep. 'against, fronting'; (2) *ǫnd*(:—OTeut. **andi*) OFris. *ande*, *and*, *an*, *end*, *en*, OHG. *anti*, *enti*, *inti*, *unti*, *endi*, *indi*, *unde*, MHG. *unde*, *und*, *unt*, mod.G. *und*, Du. *en*, conj.; cf. L. *ante* before, Gr. *ἀντί* against, Skr. (Vedic) *antí* over against, locative of *antá* 'end, boundary, vicinity,' hence 'on the frontier of, abutting on, fronting, facing.' From the idea of opposition, juxtaposition, or antithesis, the word was used in the Teut. langs. to express the mutual relation of notions and propositions. The general Teut. form of the conj. is **and(a*; in OE., with the early loss of *ǫnd*, *and* (*ǫnd*) remained for both, but soon became obs. as prep., exc. in a few derivatives: see C. The levelling of OE. *ǫnd*, *ęnd*, under the single form *and* was no doubt helped by the fact that the conj. is nearly always unemphatic, so that the vowel is obscured and tends to sink to a mere voice glide ((ə)nd). From the same cause the final *d* has from early times been often dropped, as now universally in the dialects, and commonly in familiar speech: bread and butter = bread 'n butter. See also AN *conj.*]

C. *conj. conditional*, = if. [This was a common use of MHG. *unde*; the ON. *enda* (which Vigfusson thinks 'probably identical' with *and*, while Sievers would see in it a reduced form of *enn pó*, even though) approached this use, in the latter clause of a conditional premiss, as 'ef þú þorir, enda sér þú nokkut at manni..' 'if thou darest, and (supposing that) thou art something of a man..' (Vigf.). It has been suggested that the Eng. use was derived from that of Norse *enda*, but this is very doubtful. More probably the idiom arose in Eng. independently, as in MHG. It may have originated from ellipsis, as in the analogous use of *so*, e.g. 'I'll cross the sea, *so* it please my lord' (Shaks.); cf. 'and it please'; or it may be connected with the introductory *and* in 'And you are going?' A direct development from the original prepositional sense, though *à priori* plausible, is on historical grounds improbable. Modern writers, chiefly since Horne Tooke, have treated this as a distinct word, writing it *an*, a spelling occas. found *c* 1600, esp. in *an' 't = and it*. See AN *conj.*]

† **and-**, *pref. Obs.* The prep. AND in comb., Goth. *anda-, and-*, OHG. *ant-, ent-*, 'against, in return, opposite, fronting, toward.' In OE. the full form (often labialized to *ǫnd-*) remained only under the stress, i.e. in sbs. and adjs.; as *'and-git* apprehension, *'andsæte* opposed, hostile, *'andswaru* answer, *'andweard* present. When proclitic, as in vbs., it was weakened to *ǫn-* as *ǫn'gitan* to apprehend. The former still remains as *an-* in *answer* (see AN- *pref.* 2); the latter, like *ǫn-* for *an-*, afterwards fell to *a-*, as in *along* (see A- *pref.* 4).

-and, *suffix*[1]. Ending of pr. pple. in northern dial., representing OE. *-ende*, early ME. midl. and south. *-ende, -inde*, later ME. and modern *-ing*; as in OE. *wrítende*, ME. north. *writand*, early south. *writende, -inde*, later *writinge*, modern *writing* (thus identified with vbl. sb. or gerund). In some north. dialects, the pple. and vbl. sb. are still distinguished as *-ănd, -ing*, or at least *-ăn', -in'*. As ppl. adjs. from Fr. ended in *-ant, -aunt*, these were often interchanged with *-and* in 15th c., as in sembl*ant*, sembl*and*; ambl*ant*, ambl*and*; cf. warr*ant*, warr*and*; tyr*ant*, tirr*and*; gi*ant*, gy*and*; merch*ant*, march*and*, and the like.

-and, *suffix*[2]. A formative element representing the termination *-andus, -a, -um* of the gerundive of Latin verbs in *-āre*. Examples of words in *-and* are *analysand, confirmand, educand, graduand, multiplicand, operand, ordinand*. The meaning of these words is passive, thus *ordinand* 'person to be ordained'. This element has never been a living suffix, having no separate existence apart from the Latin gerundive form from which it is derived. The gerundial endings are sometimes retained in their Latin (neut.) form (with pl. *-a*), as in *avizandum, memorandum, notandum*.

1. a. The indefinite space included between two meeting lines or planes, the shape of which depends upon their mutual inclination; hence in *Geom.* the degree of inclination of two lines to each other, or of one line to a horizontal or vertical base-line.

The angle is measured by the portion of the circumference of a circle described from the intersection of the lines as centre, which is intercepted between the two lines. The inclination of two lines in the same plane is a plane angle, which may be *rectilineol* or *curvilineol*, as it is formed by straight or curved lines; the inclination of two lines on the surface of a sphere is a *spherical* angle; the space included by more than two plane angles meeting at a point is a *solid* angle.

Anglo-Saxon (ˌæŋgləʊˈsæksən), *sb.* and *a.* Forms: 1 **Angul-, Angel-, Ongol-seaxan** *sb. pl.*, 7– **Anglo-Saxon, -saxon**, 9 **Anglosaxon.** [Prob. in 9th c., as certainly in 17th, ad. L. *Anglo-Saxones, -Saxon-icus*, in which *Anglo-*, comb. form of *Anglus, -ī*, is used adverbially, as in similar L. and Gr. compounds, as *sacro-sanctus* sacredly sanctioned, *'Ινδο-σκυθία* Indian Scythia, Scythia of the Indus, *Συρο-φοῖνιξ*, L. *Syrophœnix*, Phœnician of Syria. Cf. also *Gallo-græci*, and in later use *Mæso-Gothi* Goths of Mœsia. Hence *Anglo-Saxones, Angel-seaxan* = English Saxons, Saxons of England or of the Angul-cynn (*gens Anglorum*, Bæda), as distinguished from the *Ald-Seaxan* (*Antiqui Saxones*, Bæda) or Old-Saxons of the continent. The earliest L. forms were *Angli Saxones, Saxones Angli* (two words 'English Saxons'), whence *Angli-Saxones*, and finally *Anglo-Saxones, Anglosaxones*. App. of continental origin; in OE. use, rare in the Eng. form; not uncommon in Latin documents down to 1100.]

I. English Saxon, Saxon of England: *orig.* a collective name for the Saxons of Britain as distinct from the 'Old Saxons' of the continent. Hence, properly applied to the Saxons (of Wessex, Essex, Middlesex, Sussex, and perhaps Kent), as distinct from the Angles.

b. *adj. absol.* In this Dictionary, the language of England before 1100 is called, as a whole, 'Old English' (OE.); *Anglo-Saxon*, when used, is restricted to the Saxon as distinguished from the Anglian *dialects* of Old English; thus we may say that *eald* was the Anglo-Saxon (*i.e.* West Saxon and Kentish) form of the normal OE. *ald* (retained in Anglian), whence, and not from *eald*, we have mod.Eng. *old*.

II. Extended to the entire Old English people and language before the Norman Conquest.

For these there was apparently at first no collective name; subsequently, the name *Englisc* (Anglish, English) was extended from the dialect of the Angles (the first to be committed to writing) to all dialects of the vernacular, whether Anglian or Saxon; and *Angul-cynn* (Angle-kin, *gens Anglorum*), and later still, during the struggle with the Danes, 'English' and 'Englishman,' to all speakers of the vernacular in any dialect Angle or Saxon. After the Norman Conquest, the natives and the new incomers were at first distinguished as 'English' and 'French,' but, as the latter also became in a few generations 'English' politically and geographically, men's notions of 'English' changed accordingly, so that the 12th c. chroniclers could no longer apply the word distinctively to the people of Edward the Confessor and Harold, for whom therefore they recalled the name 'Saxon,' applicable enough to the West Saxon dynasty, but incorrect when extended to the whole Anglekin over whom they ruled. At the hands of the Latin chroniclers, often foreigners, to whom the historical relations of Saxons and Angles were not very obvious, a similar extension of meaning had been given to *Anglo-Saxones*. But this name did not reappear in English till after 1600, when, with the revival of OE. learning, historians and philologists again felt the need of distinguishing English 'Saxon' from the Saxon of Germany. The modern use dates from Camden, who himself used *Anglo-Saxon-es, -icus*, in Latin, and *English Saxon* in his vernacular works. His translator adapted the Lat. as *Anglo-Saxon*, which gradually displaced 'English Saxon,' first as sb., and finally as adj. also. But it was applied, as *Saxon* had been for 500 years erroneously applied, to 'Old English' as a whole. This has led in turn to an erroneous analysis of the word, which has been taken as = *Angle* + *Saxon*, a union of Angle and Saxon; and in accordance with this mistaken view, modern combinations have been profusely formed in which *Anglo-* is meant to express 'English and..', 'English in connexion with..', as 'the Anglo-Russian war'; whence, on the same analogy, Franco-German, Turko-Russian, etc. See ANGLO-.
